Advisory Action Before the Filing of an Appeal Brief

Part of Paper No. 041806

Applicant's arguments filed 04/06/06 have been fully considered but they are not persuasive.

Applicant first argues that Hsieh teaches a device that is different from the instant invention for the reasons that "Although Hsieh teaches an ONO film 130, the ONO film 130 of Hsieh serves as an intergate dielectric layer between the floating gate 120 and the control gate 140, rather than as a charge-trapping layer as in the present invention". Examiner argues that the function of the ONO film in Hsieh is irrelevant because the device of Hsieh discloses all of the limitations of the present claims, as outlined in the Final Rejection, dated 1/6/06. Applicant next argues that "Fundamentally, the charge trapping unit of Hsieh is the polysilicon floating gate (120), whereas the present invention teaches the charge trapping layer is made from silicon nitride, replacing the FGs in prior art and in Hsieh. Examiner argues that it is not necessary to "replace" the polysilicon floating gate of Hsieh with a silicon nitride layer in order for Hsieh's disclosed invention to read on the limitations of the claimed instant invention, as outlined in the Final Rejection, dated 1/6/06.

Applicant finally argues that Hsieh's teaching that "the fourth polysilicon layer...serves as the word line that is oriented perpendicular to the first and second bit lines" departs from the instant invention's teaching that the CG line serves as the word line and the control gate line is aligned parallel to the SG lines. In response to this argument, it is noted that the features upon which applicant relies are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
